

# OS X Mavericks and the Casper Suite

Q & A from the webcast - November 5, 2013

Will there be a way to categorize the list of packages?

Yes, the JSS can categorize and prioritize packages that are available to clients on distribution points.

Is there a client that is required on end user devices?

OS X devices managed by the Casper Suite have a client installed that performs the regular check-in to the JAMF Software Server. There are many ways to get the binary installed, both end user initiated and administrator initiated.

Is the ability to verify and remediate mismatched FileVault keys only available in version 9.2 of the Casper Suite?

The extensions to FileVault 2 integration, including the ability to remediate the recovery key, are only available in version 9.2 and later of the Casper Suite.

Does the user get notified that the FileVault 2 key has been remediated?

The Casper Suite provides a notification framework to provide notification to end users on any event, including if a FileVault 2 recovery key issue has been remediated. This is not enabled by default, and is configurable per policy.

What directory services are supported with the Casper Suite?

The Casper Suite supports binding client devices to any directory service supported by the operating system. It has built in options and configuration for Active Directory, Open Directory, PowerBroker Identity Services, AdmitMac, and Centrify.

Will downloading the OS X Mavericks installer and associating it with an Apple ID affect the deployment through the Casper Suite?

Any OS X installer that is downloaded from the Mac App Store is deployable, regardless of its association with an Apple ID.

Does the ability to enable the management account to unlock the FileVault 2 encrypted drive work on OS X Mountain Lion?

The ability to add or remove accounts from the FileVault 2 approved list requires OS X Mavericks or later.

Does the upgrade process also update the recovery partition?

The OS Migration process will make any required updates to the recovery partition, and will create the recovery partition if it does not exist.

Is there a database repair toolkit or command?

Each installation of the JSS includes the JSSDatabaseUtility, which provides simple methods for backing up, restoring, and scheduling regular database maintenance tasks.
